

## New Control & Monitor Software RouteWarePRO 5.0 Provides Robust Capabilities

Tweet

FOR IMMEDIATE RELEASE

**BURBANK, Ca, USA - July 13, 2017** - Universal Switching Corporation ([uswi.com](http://uswi.com)), a leading manufacturer of signal switching and distribution products, has announced the 5.0 release of their popular RouteWarePRO control and monitor software package. The company says the new release is packed with new features and improvements and promises to deliver a clean and feature rich control platform with free factory technical support. The new 5.0 release highlights sophisticated features such as Auto Discovery, scheduling, on-the-fly channel naming among the new features. It is specifically designed for Windows 10/8/7 compatibility to control and monitor virtually an unlimited number of USC products. During field trials, factory application staff demonstrated the free 30-Day software was simple to install, and quickly connected to actual hardware at the Universal Switching Corporation factory. During the demonstration, company staff also mentioned that the software is available for immediate download from their website, includes free 30-Day trial, free technical support, and that they provide actual factory demo hardware that anyone can control.
